Press Release

Milliman analysis: Corporate pension funded status remains above 91% as year draws to a close

Corporate CFOs, investors, and participants cheer a remarkable \$392 billion improvement in funded status over the last 12 months

Seattle – Nov. 7, 2013 – Milliman, Inc., a premier global consulting and actuarial firm, today released the results of its latest Pension Funding Index, which consists of 100 of the nation's largest defined benefit pension plans. In October, these plans experienced a \$31 billion increase in asset value and a \$28 billion increase in pension liabilities. The pension funding deficit decreased to \$126 billion at the end of October.

"We faced a frightening funded status at this time last year, with the discount rate reaching 3.96%, one of the lowest in the 13-year history of this study," said John Ehrhardt, co-author of the Milliman Pension Funding Index. "Twelve months and \$392 billion worth of improvement later, we are on track to end the year better than 90% funded."

Year-to-date, assets have improved by \$107 billion and the projected benefit obligation has been reduced by \$157 billion, resulting in a massive improvement in funded status and increasing the funded ratio to 91.9%.

Looking forward, if the Milliman 100 pension plans were to achieve the expected 7.5% median asset return for their pension portfolios, and if the current discount rate of 4.67% were maintained, funded status would improve, with the funded status deficit narrowing to \$113 billion (92.7% funded ratio) by the end of 2013 and \$27 billion (98.2% funded ratio) by the end of 2014.

Founded in 1947, Milliman is an independent firm with offices in major cities around the globe. For further information, visit www.milliman.com

About the Milliman 100 Pension Funding Index

For the past 13 years, Milliman has conducted an annual study of the 100 largest defined benefit pension plans sponsored by U.S. public companies. The Milliman 100 Pension Funding Index projects the funded status for pension plans included in our study, reflecting the monthly impact of market returns and interest-rate changes on pension funded status, utilizing the actual reported asset values, liabilities, and asset allocations of the companies' pension plans.

The results of the Milliman 100 Pension Funding Index were based on the actual pension plan accounting information disclosed in the footnotes to the companies' annual reports for the preceding fiscal year and for previous fiscal years. In addition to providing the financial information on the funded status of U.S. qualified pension plans, the footnotes may also include figures for the companies' nonqualified and foreign plans, both of which are often unfunded or subject to funding standards different from those for U.S. qualified pension plans. The results do not represent the funded status of the companies' U.S. qualified pension plans under ERISA.
